

| | Ratio | Formula | Measures / Notes |
|------------------|--|---|---|
| Liquidity Ratios | 1 Current Ratio | $\frac{\text{Current Assets}^*}{\text{Current Liabilities}}$ <p>Current Assets = Cash + Cash Equivalents + Short term owned Securities + Net RCV + Inventory Cash Equivalents + = Available for Sale OR Held to maturity OR Trading Securities From the name of ratio : should be currents</p> | Short Term Liquidity Ratio 2:1 ►► Normal  |
| | 2 Quick Cash Ratio Acid test ratio | $\frac{\text{Cash} + \text{Cash Equivalents} + \text{Short term owned Securities} + \text{Net RCV}}{\text{Current Liabilities}}$ <p>Derivative of Current ratio</p> | Shorter Term Liquidity within few days |
| | 3 Cash To Current Liabilities Ratio | $\frac{\text{Cash} + \text{Cash Equivalents} + \text{Short term owned Securities}}{\text{Current Liabilities}}$ <p>Derivative of Current ratio</p> | measures the immediate amount of cash available to satisfy short term debt Shorter Term Liquidity within faster than few days Ratio ≥ 0.4 ►► healthy |
| | 4 Cash Flow Ratio | $\frac{\text{Annual Operating Cash Flow}}{\text{Average Current Liabilities}}$ | How many times the Op.Cash Flow is more than Current Liabilities |
| | 5 Cash To Current Assets Ratio | $\frac{\text{Cash} + \text{Cash Equivalents} + \text{Short term owned Securities}}{\text{Average Current Assets}}$ <p>Rule of thumb : Curr.Assets should be average .</p> | Current Assets Liquidity |
| Activity Ratios | 6 Inventory Turnover | $\frac{\text{Annualized C.O.S}}{\text{Average Annual Inventory}^*}$ $\frac{\text{Average Inventory}}{300, 360, 365}$ <p>Average Annual Inventory * = (Inventory Beginning balance + Inventory Ending balance) / 2 Turnover calculation is = (Annual) ÷ (Average Annual)</p> | measures the number of times a company sells its inventory during the year high ratio indicated that the product is selling well How many times a firm sells the average from inventory Larger ratio is better |
| | 7 Days Sales in Inventory | $\frac{300, 360, 365}{\text{Inventory Turnover}}$ $\frac{\text{Average Inventory}}{\text{Average Daily C.O.S}^*}$ <p>Average Daily C.O.S * = Annual C.O.S / 365 Days calculation is = (average) ÷ (Average Daily)</p> | Inventory Management I  |
| | 8 Receivable Turnover | $\frac{\text{Net Annual Credit Sales}}{\text{Average Annual RCV}}$ <p>Turnover calculation is = (Annual) ÷ (Average Annual)</p> | How many times RCV turn in a year Larger ratio is better |
| | 8 Payable Turnover | $\frac{\text{Net Annual Credit Purchases}}{\text{Average Annual Payables}}$ <p>Turnover calculation is = (Annual) ÷ (Average Annual)</p> | How many times Pybl turn in a year Better if RCV Turnover ratio is bigger than Payable turnover ratio . |
| | 9 Days Sales in Receivable Average Collection Period | $\frac{300, 360, 365}{\text{Receivable Turnover}}$ $\frac{\text{Average Receivable}}{\text{Average Daily Credit Sales}^*}$ <p>Average Daily Credit Sales * = Annual Credit Sales / 365 Days calculation is = (average) ÷ (Average Daily)</p> | Efficiency of RCV collection |

| | Ratio | Formula | Measures / Notes |
|-----------------|--|---|---|
| Activity Ratios | 10 Assets Turnover | = $\frac{\text{Sales}}{\text{Assets}}$ | Efficiency of using All Assets to generate profits |
| | Fixed Assets Turnover | = $\frac{\text{Sales}}{\text{Net Fixed Assets}}$ | Efficiency of using Fixed Assets to generate profits |
| | 14 Days Purchases in Payable Average Payment Period | = $\frac{\text{Average Account Payable}}{\text{Average Daily Purchases}}$ Days calculation is = (average) ÷ (Average Daily) | <div> دليل المحاسبين ACCOUNTANTS DIRECTORY www.jps-dir.com </div> |
| | 15 Purchases | = $\text{C.O.S} + (\text{Ending Inventory} - \text{Beginning Inventory})$ | |
| | 11 Trend Overtime | = $\frac{\text{Provision for doubtful RCV}}{\text{Gross Account RCV}}$ | |
| | 12 Operating Cycle | = $\text{Days Sales in Inventory} + \text{Days Sales in RCV}$ | |
| Leverage Ratios | 13 Cash Cycle | = $\text{Operating Cycle} - \text{Days Purchases in Payable}$ | |
| | 16 Financial Leverage Ratio F.L.R Equity Multiplier | = $\frac{\text{Average TTL Assets}}{\text{Average "Common Equity" *}}$ TTL "Common Equity" * = TTL Equity - Preferred Stock - Any Minority Interest FLR = Average ÷ Average | Using debts to finance (Operations & Assets) A firm Ability to pay all debts |
| | 17 Financial Leverage Index F.L.I | = $\frac{\text{ROE *}}{\text{ROA *}}$ | A firm success in using the FLR |
| | 18 Return on Equity ROE * | = $\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Average TTL Equity}}$ Returns : Net Income , So Average | <div> دليل المحاسبين ACCOUNTANTS DIRECTORY www.jps-dir.com </div> |
| | 19 Return on "Common Equity" ROCE Adjusted ROE by removing Preferred equity | = $\frac{(\text{Net Income after Interest \& Tax}) - \text{Preferred Dividends}}{\text{"Common Equity" *}}$ | |
| | 20 Return on Assets ROA * | = $\frac{\text{Net Income}}{\text{Average Assets}}$ Returns : Net Income , So Average | |
| | 21 Degree of Financial Leverage Ratio DFL | = $\frac{\text{EBIT}}{\text{Earning before Tax}}$ = $\frac{\% \Delta \text{ Net Income}}{\% \Delta \text{ EBIT}}$ | Using Fixed Operating Costs to generate Op.Profits |
| | 22 Degree of Operating Leverage Ratio DOL | = $\frac{\text{Contribution Margin *}}{\text{EBIT}}$ = $\frac{\% \Delta \text{ EBIT}}{\% \Delta \text{ SALES}}$ Contribution Margin * = SALES - All Variable Costs | |
| | 23 Total Debt To Total Equity Total Debt To Total Assets Total Debt Ratio | = $\frac{\text{TTL Liabilities}}{\text{TTL Assets}}$ | A firm Assets been financed by Creditors Measures A firm Liabilities on Short/Long Term |
| | 24 Total Debt To Equity Capital | = $\frac{\text{TTL Liabilities}}{\text{TTL Equity}}$ | Measures A Firm Debts To Equity Liability . Larger ratio is not good , it means the Firm debts from creditors is more than from Equity |

| | Ratio | | Formula | Measures / Notes |
|----------------------|-------|--|--|--|
| Leverage Ratios | 25 | Equity Capital To Total Debt | = $\frac{\text{TTL Equity}}{\text{TTL Liabilities}}$ | |
| | 26 | Long Term Debt To Equity Capital Debt Equity Ratio | = $\frac{\text{Long Term Liabilities}}{\text{TTL Equity}}$ | The L.Term debts in Current liabilities TO Equity |
| | 27 | Fixed Assets To Equity Capital | = $\frac{\text{Net FAS}}{\text{TTL Equity}}$ | A firm Assets been financed by Equity Ratio < 1 ►► favourable liquidity |
| | 28 | Net Tangible Assets to Long term Debt | = $\frac{\text{TTL Assets} - (\text{In-Tangible Assets}) - \text{TTL Liabilities}}{\text{Long Term Debt}}$ | How a firm assets cover L.term debt |
| | 29 | TTL Liabilities to Net Tangible Assets | = $\frac{\text{TTL Liabilities}}{\text{TTL Assets} - (\text{In-Tangible Assets}) - \text{TTL Liabilities}}$ | How a firm assets cover L.term debt |
| | 30 | Time Interest Earned | = $\frac{\text{EBIT}}{\text{Interest Exp.}}$ | A firm ability to pay interests , Larger is good How many times the Earning cover interests |
| | 31 | Earned to Fixed Charges Fixed Charge Coverage Ratio | = $\frac{\text{EBIT} + \text{Estimate Long Term Operating Leases} *}{\text{Interest Exp.} + \text{Estimate Long Term Operating Leases}}$ Estimate Long Term Operating Leases * = 1/3 Paid operating Lease | Indicator the firm ability to face fixed cost of assets financing |
| Profitability Ratios | 32 | Cash Flow to Fixed Charges | = $\frac{\text{EBIT} + \text{Estimate Long Term Operating Leases} + \text{Pre-tax Op. Cash Flow}}{\text{Interest Exp.} + \text{Estimate Long Term Operating Leases}}$ | |
| | 33 | Return On Invested Capital ROIC Return On Assets | = $\frac{\text{Net Income}}{\text{Average Invested Capital}}$ Returns : Net Income , So Average | <div> دليل المحاسبين ACCOUNTANTS DIRECTORY www.jps-dir.com </div> |
| | 34 | IF Invested Capital = Total Assets Return On Invested Capital ROIC | = $\frac{\text{Net Income} + \text{Interest Exp.}(1-\text{Tax Rate}) + \text{Minority interest in Income}}{\text{Average TTL Assets}}$ Returns : Net Income , So Average | |
| | 35 | IF Invested Capital = (Debt+Equity) Return On Invested Capital ROIC | = $\frac{\text{Net Income} + \text{Interest Exp.}(1-\text{Tax Rate}) + \text{Minority interest in Income}}{\text{Average Long term Debt} + \text{Average Equity}}$ Returns : Net Income , So Average | |
| | 36 | IF Invested Capital = Common Shareholder Equity Return On Invested Capital ROIC | = $\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Average Common Shareholder Equity}}$ Returns : Net Income , So Average | |
| | 37 | Profit Margin | = $\frac{\text{Net Income}}{\text{Sales}}$ | Measures net profit achieved per each dollar of sales , It indicates to Achieved Sales after covering & pay all C.O.S & expenses , Larger Ratio is good. |
| | 38 | Total Debt To Equity | = $\frac{\text{TTL Liabilities}}{\text{Shareholders Equity}}$ | |

| | Ratios Above : | We mean |
|----|-----------------------------|---|
| 1- | Total Debt | Total Liabilities |
| 2- | Total Equity | Total Assets |
| 3- | Equity Capital | Total Equity |
| 4- | Long term Debt | Long term Liabilities |
| 5- | denominator | المقام في الكسر العشرية |
| 6- | numerator | البسط في الكسر العشرية |
| 7- | Turn Overs | نسب النشاط Activity Ratios |
| 8- | denominator = common equity | Net income in numerator - Preferred dividends |

The DuPont Company Equations

| | | | |
|--------|--|---|--|
| 39 | Back to ROA , due to DuPont company here : | | |
| Step A | Return on Assets ROA * | = | $\frac{\text{Net Income}}{\text{.....Total Assets}}$ |
| | Previously , TTL Assets was Average assets . | | |
| Step B | Return on Assets ROA * | = | $\frac{\text{Net Income}}{\text{Total Assets}} \quad \text{X}$ |
| | Net Sales ÷ Net Sales = 1 , so this is adjusting side to fix measure | | |
| Step C | Return on Assets ROA * | = | $\frac{\text{Net Income}}{\text{Net Sales}} \quad \text{X}$ |
| | Here we adjust the look of the equation to get Equation of : Profit margin on sale X Assets turnover ratio | | |
| | So , | | |
| | Profit margin on sale Return on Sales Net Income Ratio | = | $\frac{\text{Net Income after interest \& tax}}{\text{Net Sales}}$ |
| | Assets turnover ratio | = | $\frac{\text{Net Sales}}{\text{TTL Assets}}$ |
| | Then Finally | | |
| | Return on Assets ROA * | = | $\text{Profit margin on sale} \quad \text{X} \quad \text{Assets turnover ratio}$ |
| | | | Measures efficiency to generate Profits from sales OR efficiency of operations |
| | | | Measures efficiency of Assets usage |
| 40 | Back to ROE , due to DuPont company here : | | |
| Step A | Return on Equity ROE * | = | $\frac{\text{Net Income after interest \& tax}}{\text{Total Equity}}$ |
| | Previously ,ROE = (N.income - pref.divd) ÷ (average comm.equity) | | |
| | Then Back to financial leverage ratio | | |
| | Financial Leverage Ratio F.L.R Equity Multiplier | = | $\frac{\text{TTL Assets}}{\text{Total Equity}}$ |
| | Previously ,ROE = (average TTL Assets) ÷ (average comm.equity) | | |
| Step B | Return on Equity ROE * | = | |
| | $\frac{\text{Net Income after interest \& tax}}{\text{Total Equity}}$ | X | $\frac{\text{Net Sales}}{\text{Net Sales}} \quad \text{X}$ |
| | Net Sales ÷ Net Sales = 1 , TTL Assets ÷ TTL Assets = 1 ,so this is adjusting side to fix measure | | |
| Step C | Return on Equity ROE * | = | |
| | $\frac{\text{Net Income after interest \& tax}}{\text{Net Sales}}$ | X | $\frac{\text{Net Sales}}{\text{TTL Assets}} \quad \text{X}$ |
| | Here adjust the look of equation to : Profit margin on sale X Assets turnover ratio X Equity Multiplier | | |
| | So , | | |
| | Profit margin on sale Return on Sales Net Income Ratio | = | $\frac{\text{Net Income after interest \& tax}}{\text{Net Sales}}$ |
| | Assets turnover ratio | = | $\frac{\text{Net Sales}}{\text{TTL Assets}}$ |
| | Equity Multiplier F.L.R | = | $\frac{\text{TTL Assets}}{\text{Total Equity}}$ |
| | Then Finally | | |
| | Return on Equity ROE * | = | $\text{Profit margin on sale} \quad \text{X} \quad \text{Assets turnover ratio} \quad \text{X} \quad \text{Equity Multiplier}$ |
| | | | Measures efficiency to generate Profits from sales OR efficiency of operations |
| | | | Measures efficiency of Assets usage |

Profitability Ratios

| | Ratio | Formula | Measures / Notes |
|--------|--|--|--|
| 41 | Back to ROCE , due to DuPont company here : | | |
| Step A | Return on "Common Equity" ROCE Adjusted ROE by removing Preferred equity | = $\frac{(\text{Net Income after Interest \& Tax}) - \text{Preferred Dividends}}{\text{"Common Equity"}}$ | |
| Step B | Return on "Common Equity" ROCE * | = | |
| | $\frac{(\text{Net Income after Interest \& Tax}) - \text{Preferred Dividends}}{\text{"Common Equity"}}$ | $\times \frac{\text{Sales}}{\text{Sales}}$ | $\times \frac{\text{TTL Assets}}{\text{TTL Assets}}$ |
| | Net Sales ÷ Net Sales = 1 , TTL Assets ÷ TTL Assets = 1 ,so this is adjusting side to fix measure | | |
| Step C | Return on "Common Equity" ROCE * | = | |
| | $\frac{(\text{Net Income after Interest \& Tax}) - \text{Preferred Dividends}}{\text{Sales}}$ | $\times \frac{\text{Sales}}{\text{TTL Assets}}$ | $\times \frac{\text{TTL Assets}}{\text{"Common Equity"}}$ |
| | Here adjust the look of equation to : Profit margin on sale available to common stockholders(adjusted) \times Assets turnover ratio \times Equity Multiplier (using commom equity) | | |
| | So , | | |
| | Profit margin on sale available to comm stockholders(adjusted) Return on Sales Net Income Ratio | = $\frac{(\text{Net Income after Interest \& Tax}) - \text{Preferred Dividends}}{\text{Sales}}$ | |
| | Assets turnover ratio | = $\frac{\text{Sales}}{\text{TTL Assets}}$ | |
| | Equity Multiplier F.L.R | = $\frac{\text{TTL Assets}}{\text{"Common Equity"}}$ | |
| | Then Finally | | |
| | Return on "Common Equity" ROCE * | = | |
| | Profit margin on sale available to common stockholders(adjusted) \times Assets turnover ratio \times Equity Multiplier (using commom equity) | | |
| 42 | Equity Growth Rate | = $\frac{\text{Net Income} - \text{Preferred Dividends} - \text{Dividends payout}}{\text{Average Common Shareholder Equity}}$ Returns : Net Income , So Average | |
| 43 | Sustainable Equity Growth Rate | = $\text{Return on common Equity} \times (1 - \text{Dividends payout Ratio})$ As , ROCE Dividends payout Ratio | Measures the percentage of distributable earning that actually distributed |
| 44 | Return on shareholders investments | = $\frac{\text{Cash dividends per common share} + \text{Market Value of re-invested Earnings}}{\text{Share price}}$ Market Value of re-invested Earnings = $\text{Earning per share} - \text{Dividends per share}$ | |
| 45 | Return on Investments/Assets Return on Assets ROA * | = $\frac{\text{Net Profit}}{\text{TTL Assets}}$ TTL Investment = $\text{Working Capital} + \text{Total long term Assets}$ = $\text{Total Equity} + \text{Long Term Debts}$ Working Capital = $\text{Current Assets} - \text{Current Liabilities}$ | A Firm Efficiency of managing & using All available cash (If a debt cash or shareholders cash) to generate returns |
